Key Points

Model Overview: Anthropic's Claude Fable 5 is the latest addition to the Mythos-class models, offering enhanced capabilities over the previous Opus 4.8 model.

Performance: Fable 5 demonstrates superior performance in various benchmarks, including a 63.2% score in agentic coding on SWE-bench Pro, surpassing Opus 4.8's 69.2%. ([itpro.com](#))

Pricing: Fable 5 is priced at \$10 per million input tokens and \$50 per million output tokens, while Opus 4.8 is available at \$5/\$25 per million tokens, respectively. ([remoteopenclaw.com](#))

Safety Measures: Fable 5 includes a refusal classifier to decline certain requests, enhancing safety. ([remoteopenclaw.com](#))

Availability: Fable 5 was temporarily suspended due to export controls but has been reinstated following the implementation of targeted safety filters. ([tomshardware.com](#))

Important Findings

Capability: Fable 5 excels in complex tasks, such as large code migrations and deep research, outperforming Opus 4.8 in these areas. ([fable-five.com](#))

Cost Efficiency: Opus 4.8 offers a more cost-effective solution for standard tasks, with a simpler API surface and lower pricing. ([remoteopenclaw.com](#))

Safety and Security: Both models have been evaluated for adversarial robustness, with Fable 5 demonstrating a lower rate of successful attacks compared to Opus 4.8. ([arxiv.org](#))

Actionable Insights

Task Selection: For complex, long-duration tasks requiring high autonomy, Fable 5 is the preferred choice due to its advanced capabilities.

Cost Consideration: For routine tasks where cost efficiency is paramount, Opus 4.8 remains a viable option, offering sufficient performance at a lower price point.

Safety Protocols: Users should be aware of the safety features in both models, especially Fable 5's refusal classifier, to ensure appropriate application in sensitive scenarios.

Availability Monitoring: Stay informed about the availability of Fable 5, as export controls and safety measures may impact its accessibility.
