

Latest LLM Model of the AI technology.

Model [nvidia/nemotron-3-nano-omni-30b-a3b-reasoning:free](#) · Generated 2026-07-06T18:56:24 · 2 sources

Key Points

- A large language model (LLM) is a machine learning model designed for natural language processing tasks such as language generation.
- LLMs have many parameters and are trained with self-supervised learning on a vast amount of text.

Important Findings

- Gemini is a family of multimodal large language models (LLMs) developed by Google DeepMind, announced on December 6 2023.
- It is the successor to LaMDA and PaLM 2 and comprises Gemini Pro, Gemini Deep Think, Gemini Flash, and Gemini Flash Lite.
- Gemini powers the Gemini chatbot and was named after the Gemini zodiac sign.

Actionable Insights

- Researchers can evaluate Gemini's multimodal capabilities to advance projects that require both text and non-textual data handling.
- Developers can integrate Gemini via its chatbot API to build more capable natural language interfaces.
- Since Gemini is the latest LLM model described in the provided results (2023), staying updated on its releases and documentation is advisable for cutting-edge applications.
